

oils in turn and you will notice that each of the oils regardless of perceived quality will fail at a similar point. Then test the same oils with X-1R and show how much better you can make them all perform.

Above picture is of laboratory standard Timken Machine as manufactured by the Falex Corporation.

We can source the smaller portable machines that you see at the trade shows for you (not the one above) but be warned they are not cheap and they are of limited use.
