

A LARGE IT FIRM IN INDIA SECURED THEIR CUSTOMER'S NETWORK

With Airtel Cyber Security Services

THE CHALLENGE

As a mandate from the end client, the customer wanted to perform a Network Vulnerability Assessment (VA) on all ENOC managed routers on a weekly basis, with the detailed scan reports being shared with the customer. As an additional requirement, they also wanted to ensure that all the device logs are stored centrally for a period of 1 year and are readily available for review.

AIRTEL'S SOLUTION

Airtel Business created a 'SOC' environment in an identified data centre which was connected to all customer sites. Through remote access and best-in-class tools, Airtel performed the Vulnerability Assessment (VA) and shared the reports with the customer on a weekly basis. Based on the customer feedback, the identified vulnerabilities were fixed through ENOC coordination.

BUSINESS IMPACT

100% compliance on the security guidelines specified by the end client.
