

Kalanchoe

These plants are thick-leaved succulents that are often seen in florist shops or garden centers. The clusters of tiny flowers produce a large bloom held aloft on stems above the majority of the foliage.

Location

indoor to semi-indoor

Ease of Care

easy to grow

Light

these can adapt to areas that get partial sunlight and will also survive quite dim situations.

Watering

let the soil dry between waterings. during winter, reduce watering. too much water can kill the plant.

Special Feature

table top decor

Toxicity

toxic if ingested

Sad Plant Signs

wilting leaves:
placed in high temperatures

soft, fragile stem:
root rot, overwatered

He who has health has hope,
and he who has hope has everything
