

TRUELIV -5

Herbal liver tonic

Modern highly commercialized poultry production systems have created a high physiological stress situation. In this situation, Liver-a vital seat of metabolism, is regularly challenged with many different agents e.g. Hepatotoxic antibiotics like sulfonamides, coccidiostats, Mycotoxins, high energy content in feed etc. This often results in decrease in efficiency of the liver particularly in detoxification & metabolic processes, thus in a way, Homeostasis is disturbed. This in turn, affects the overall performance of the bird.

Trueliv -5 is synergistic combination of phytoactives which act as hepato-protective, hepatoregenerative & hepatostimulative. These natural actives optimize the response against various toxins, improving liver health, optimizing feed intake digestion, absorption, which results in improvement in overall performance, better productivity, liveability, FCR & weight gain.
