

# GUJARAT TECHNOLOGICAL UNIVERSITY

**Program Name: Diploma Engineering**

**Level: Diploma**

**Branch: Instrumentation and Control Engineering**

**Subject Code : DI04017011**

**Subject Name : Process Instrumentation-II**

<b>w. e. f. Academic Year:</b>	2025-26
<b>Semester:</b>	4 <sup>th</sup>
<b>Category of the Course:</b>	PCC

<b>Prerequisite:</b>	Students should have basic knowledge of the measurement principles covered in Process Instrumentation–I, including pressure, flow, speed, and humidity measurement, along with fundamentals of electrical and electronic circuits, sensors and transducers and signal conditioning. This foundation will help them learn the new topics in this subject, such as temperature and level measurement, temperature and level transmitters, and force, torque, and vibration instruments.
<b>Rationale:</b>	In the present industrial scenario, accurate and precise measurement of process parameters such as temperature, level, force, torque, and vibration is essential for the safe and efficient operation of process industries. Diploma engineers must be able to identify, select, calibrate, troubleshoot, and maintain various process instrumentation systems. This course is therefore designed to equip students with the skills required to operate and test different types of process instruments used for measuring temperature, level, force, torque, and vibration.

### COURSE OUTCOME:

After Completion of the Course, Student will able to:

No	Course Outcomes	RBT Level
1	Apply temperature measurement principles using contact and non-contact instruments.	U A
2	Classify and compare various level measurement methods and switches.	R U A
3	Operate and interpret temperature and level transmitters.	U A
4	Evaluate force and torque measuring instruments for industrial use.	U A
5	Select suitable vibration measuring instruments for industrial monitoring.	R U

*\*Revised Bloom's Taxonomy (RBT)*

### TEACHING AND EXAMINATION SCHEME:

Teaching Scheme (in Hours)			Total Credits L+T+(PR/2)	Assessment Pattern and Marks				Total Marks
L	T	PR		C	Theory		Tutorial / Practical	
			ESE(E)		PA(M)	PA(I)	ESE(V)	
3	0	2	4	70	30	20	30	150

### SUGGESTED PRACTICAL EXERCISES:

The following practical outcomes (PrOs) that are the sub-components of the COs. *Some of the PrOs marked ‘\*’ are compulsory, as they are crucial for that particular CO. These PrOs need to be attained at least at the ‘Precision Level’ of Dave’s Taxonomy related to ‘Psychomotor Domain’.*

Sr. No.	Practical Outcomes (PrOs)	Approx. Hrs. Required
1	Perform temperature measurement using expansion thermometer.	04
2	Verify the law of intermediate metal for the available type of thermocouple.	02
3	Test the effect of reference junction temperature on given thermocouple	04
4	Convert output of thermocouple (mV) into temperature (°C) using corresponding thermocouple calibration table.	04
5	Measure the temperature using RTD and Test.	04
6	Calculate temperature coefficient of resistance using RTD.	02
7	Measure the temperature using Thermistors and Plot the characteristic curve.	04
8	Measure the temperature of heating element using Optical Pyrometer.	04
9	Measure the temperature of heating element using radiation Pyrometer.	04
10	Test the operation of temperature switch at given Temp.	02
11	Measure the temperature using fiber Optic thermometer.	02

Subject Code : DI04017011

Subject Name : Process Instrumentation-II

Sr. No.	Practical Outcomes (PrOs)	Approx. Hrs. Required
12	Measure the temperature using infrared thermometer.	02
13	Measurement of level in water tank with the help of sight glass.	04
14	Measurement of level in water tank with the help of pressure gauge.	04
15	Measurement of level in a tank using capacitive transducer.	04
16	Test Float type level switch.	04
17	Test Rotating paddle level switch.	04
18	Test Conductivity level switch.	04
19	Use differential pressure type level transmitter for given range & Test.	04
20	Use Electronic Temperature transmitters for given range & Test.	04
21	Demonstrate zero suppression and zero elevation using DP transmitter.	04
22	Measure torsion by electrical torsion meter.	04
23	Use load cell and test for performance.	04
24	Measure vibration by vibration analyser.	04

### Note

- i. More **Practical Exercises** can be designed and offered by the respective course teacher to develop the industry relevant skills/outcomes to match the COs. The above table is only a suggestive list.
- ii. The following are some **sample** 'Process' and 'Product' related skills (more may be added/deleted depending on the course) that occur in the above listed **Practical Exercises** of this course required which are embedded in the COs and ultimately the competency.

Sr. No.	Sample Performance Indicators for the PrOs	Weightage in %
1	Prepare experimental setup	30
2	Operate the equipment setup or circuit	10

Sr. No.	Sample Performance Indicators for the PrOs	Weightage in %
3	Follow safe practices measures	20
4	Record observations correctly	20
5	Interpret the result and conclude	20
<b>Total</b>		<b>100</b>

## MAJOR EQUIPMENT/ INSTRUMENTS AND SOFTWARE REQUIRED:

These major equipment/instruments and Software required to develop PrOs are given below with broad specifications to facilitate procurement of them by the administrators/management of the institutes. This will ensure conduction of practical in all institutions across the state in proper way so that the desired skills are developed in students.

Sr. No.	Equipment Name with Broad Specifications	PrO. No.
1	Multimeter	All
2	DC power supply ( -30 →0→+30 V with at least 1A current capacity)	All
3	Electrical tool kit.	All
4	Circuit/Trainer board/ Demonstration modules of Thermocouples, RTDs, Thermistors	1-7
5	Temperature Switches, Optical Pyrometer, Radiation Pyrometer	8-10
6	Sight Glass type Level Indicator	13
7	Float type, Displacer type and Capacitance type Level Switches	16-18
8	Fiber Optic Thermometer, Ultrasonic Thermometer, Laser Thermometer	11-12
9	Capacitance type Level Transducer	15
10	Electronic Temperature transmitters	20
11	Differential pressure type Level Transmitter	19, 21
12	Load Cell	23
13	Vibration Analyzer	24
14	Electrical Torsion Meter	22

---

## **AFFECTIVE DOMAIN OUTCOMES:**

The following sample Affective Domain Outcomes (ADOs) are embedded in many of the above-mentioned COs and PrOs. More could be added to fulfil the development of this competency.

- a) Work as a leader/a team member for assigned student activity.
- b) Follow safety practices and procedure in Lab.
- c) Realize the importance of engineering for societal development.
- d) Develop gradually the engineering mindset in day-to-day observation

## **SUGGESTED STUDENT ACTIVITIES:**

Other than the classroom and laboratory learning, following are the suggested student-related co-curricular activities which can be undertaken to accelerate the attainment of the various outcomes in this course: Students should conduct following activities in group and prepare reports of about 5 pages for each activity, also collect/record physical evidences for their (student's) portfolio which will be useful for their placement interviews:

- a) Industrial visit for students. (Chemical industries, petroleum industries, production industries.) So that students can have exposure to the real industrial realm.
- b) Department should arrange a workshop/seminar where students can have interaction with industry personnel.
- c) Videos/Animation for different devices should be shown. Download videos of different industries from various YouTube channels like how it's made, how stuff works and show in class and discuss instrumentation used in that industry.
- d) Model making.

## **SUGGESTED SPECIAL INSTRUCTIONAL STRATEGIES (if any):**

Following Sample strategies teacher can use to accelerate the attainment of the various outcomes in this course:

1. Use instrumentation trainer kits to demonstrate real-time measurement of pressure, temperature, flow, and level and to perform hands-on calibration using standard instruments.
2. Utilize industrial process simulation software such as MATLAB/Simulink, LabVIEW, Factory I/O, or SCADA simulators to visualize process behaviour and signal conditioning.
3. Demonstrate measurement principles using cutaway models and working models of various industrial instruments.
4. Use virtual labs and online platforms (NPTEL/AICTE) for performing simulated experiments related to process measurement.
5. Arrange field visits to process industries for exposure to real-time process parameters, control loops, and industrial instrumentation systems.
6. Implement case study-based learning focusing on transmitter faults, calibration issues, and troubleshooting scenarios from industries.

# GUJARAT TECHNOLOGICAL UNIVERSITY

Program Name: Diploma Engineering

Level: Diploma

Branch: Instrumentation and Control Engineering

Subject Code : DI04017011

Subject Name : Process Instrumentation-II

7. Apply problem-based learning (PBL) by assigning real-world measurement and instrumentation problems for student analysis.
8. Demonstrate standard calibration procedures, including zero, span, linearity, and hysteresis checks, using proper calibration documentation.
9. Use videos, animations, and AR/VR content to explain the working of pressure, temperature, flow, and level measurement devices.
10. Assign mini-projects and hands-on activities related to process parameter measurement, signal conditioning, and microcontroller/PLC interfacing.
11. Promote group activities and peer learning for calibration work, instrument connections, and laboratory data analysis.
12. Use standard industrial documentation such as P&ID diagrams, datasheets, instrument index, and loop diagrams during teaching and assignments.
13. Adopt flipped classroom techniques by providing pre-class learning materials and conducting in-class problem-solving discussions.

## SUGGESTED MICRO-PROJECTS:

1. Thermocouple Characterization
2. RTD (Pt100) Linearity Check
3. Level Switch Testing Panel
4. DP Transmitter Zero Suppression/Elevation Demonstration
5. Load Cell Calibration Chart Development
6. Vibration Measurement on Motor Shaft

## SUGGESTED LEARNING RESOURCES:
