

An Appeal to provide Oxygen cylinder/refill/support to nearby hospitals & needy citizens

We are all aware that whole world has been facing COVID Pandemic and our country is facing unprecedented situation during the second wave and it is noticed that there is a huge shortage of medical oxygen and beds in the hospitals across the country. Being an educational institute you have all the infrastructure and might be possessing a few oxygen cylinders with you in your chemistry lab or welding workshop etc. and therefore I appeal to donate these oxygen cylinders to nearby hospitals & needy citizens and also to help them to refill those oxygen cylinders. Your help to hospital and needy citizens will immensely help the nation to tide over the crisis. You are also requested to provide oxygen concentrators to nearby hospitals & needy citizens as far as possible. Wherever requested or feasible, provide Covid isolation centres.

It is also to mention that Indian Institute of Science (IISc) has developed an oxygen generation system for small-scale medical requirements. The process uses low power and meets the specifications as per the MoH&FW. We had already intimated about this couple of days ago.

In view of the above, AICTE requests Interested agencies, institutions and individuals interested in using the design, may contact Prof. Dasappa for further details. Support will be extended in terms of complete product engineering drawing, bed material information and necessary control logics under Open Source Licensing terms.

You are requested to kindly disseminate this information among all the faculty members, students, etc. so that they can avail/help in this pandemic and can serve the nation in this crisis.

If the lessons of humanity are not used now, we don't deserve to be called humans.

Let us join hands to fight against the Covid pandemic.
