

# INV | INVACIO distribution smart contract

## Audit

Report Audit The **INV** distribution smart contract code **INV Token** ("The smart contract") has been audited. For the imported standard files from **CodeEye Solutions**, the latest commit `0xece83617db208ad255ad4f45daf81e25137535bb` was used in the audit.

Also found at : [https://github.com/Invacio/token/blob/master/token\\_v3\\_phase\\_1](https://github.com/Invacio/token/blob/master/token_v3_phase_1)

Those standard files have not been audited separately and we have not considered any auxiliary files such as unit tests. Below our assessment and recommendations, in order of importance.

## Critical Severity

No issues of critical severity. The contract can be deployed for the intended purposes.

## High Severity Issues

No High Severity Issues.

## Medium Severity Issues

No Medium Severity Issues.

## Low Severity Issues

No Low Severity Issues.

## Additional Information and Notes

1. The smart contract is ERC20 compatible, as required by the functional specification.
2. All the supply will be created and distributed by central owner account so it is highly recommended to use hardware wallet for protecting owner account or a multisig wallet.

## Conclusions and Recommendations

3. No critical, Medium or Low issues have been found in the code.
4. In general, it is highly recommended to comply with community best practice of ERC20 token issuance and to use sanity checks on function arguments.

CodeEye Solutions
