

AppLovin Android Pokkt Mediation

Prerequisites

- Supports AppLovin version 6.1.5 and above.
 - Please create account at www.applovin.com.
 - There is no direct extension is available for this so please download the latest Android SDK and create extension for this. Please follow the below link: <https://www.applovin.com/integration#androidIntegration>.
 - Below link will help to understand how AppLovin works. <https://www.applovin.com/integration#androidIntegration>.
 - Please follow below link for rewarded video: <https://www.applovin.com/integration#androidRewardedVids>.
-

Configuration in Application

- Add created AppLovin extension as a subproject in your main project. You need to update this info in .mkb file of main project.
 - Add the necessary permissions for AppLovin as suggested in AppLovin integration document to your application manifest xml file.
 - Add the recommended activities and meta data to your Android Manifest xml file as suggested in integration guide.
-

Code changes

- There is nothing to do in coding. Pokkt native extension will be taking care of everything.
- Please declare class name along with package name “com.pokkt.thirdparty.AppLovinNetwork.java” and other details in your POKKT account Dashboard for AppLovin network setting.
