

MoPub Pokkt Mediation

Prerequisites

- Please create account at <https://app.mopub.com/>.
 - Please read basic instructions at <https://dev.twitter.com/mopub/android/getting-started> to integrate your android application with MoPub.
 - For rewarded video settings and integration please check this link: <https://dev.twitter.com/mopub/android/rewarded-video>.
 - Register your App here and do the needed setting to show the video ad.
-

Configuration in Application

- Download the latest MoPub SDK and also get the supported file like exoplayer jar.
 - Add the necessary permissions for MoPub as suggested in MoPub integration document to your application manifest.
 - Add the recommended activities and meta data to your AndroidManifest.xml as suggested in integration guide.
-

Code changes

- Create a class which implements Pokkt's **AdNetwork** interface.
- This class should also implement MoPub Callback interface **MoPubRewardedVideoListener**.
- Pokkt SDK's PokktCustomNetworkVideoDelegate methods should be mapped from your newly created class methods. These are the methods which are important and which will be used to fire event to POKKT.
 - onRewardedVideoLoadSuccess,
 - onRewardedVideoLoadFailure
 - onRewardedVideoStarted
 - onRewardedVideoPlaybackError
 - onRewardedVideoClosed
 - onRewardedVideoCompleted

Friday, 18 December 2015

- This class should also implement **Application.ActivityLifecycleCallbacks** interface to map activity lifecycle with MoPub state.
- Sample implementation of this class is included in release “**MoPubNetwork.java**”. Please use this java file in your project.
- Now the last part, please declare this class name along with package name (fully qualified class name) in your Pokkt account Dashboard for MoPub network setting.
