

Pokkt Android SDK Version Notes

This version is a major improvement over version 4.0. Please see the 4.0 version notes for detailed information of SDK 4.0

Pokkt Android SDK v4.1.0 has following changes:

1. APIs are renamed and APIs signature have changes.
2. AdCampaignDelegate is no more set via manifest. You will have to implement the AdCampaignDelegate interface in your project to listen for all ad related events. Please call [PokktManager.setAdDelegate\(adCampaignDelegate\)](#) to register the AdCampaignDelegate implementation with the pokkt SDK.
3. For almost all ad related methods call, [AdConfig](#) instance is required. Please refer integration document for detail.
4. For pokkt initialisation and offerwall, [PokktConfig](#) need to be supplied explicitly in method call.
5. There is no auto caching of pokkt ads in this release.
6. Pokkt now serves rewarded video ads as well as rewarded interstitials.
7. Pokkt Ad player UI components are configurable from server and by developer.
8. Pokkt Ad player shows the ad in buffering mode when pokkt ad is available but ad is not cached. This is not the recommended approach as it gives a bad user experience to user. It can be used when the developer has a requirement where he can not wait till the ad is cached.
9. Open calendar application if calendar permission is not provided for calendar followup end card action.
10. Bug fixes.
11. We recommend the usage of activity context for getting ad from mediated networks as many ad networks depend on activity context.
12. Enhanced Mediation support for following networks:
 1. AdColony - Rewarded Video Ad
 2. Applovin - Rewarded Video Ad and Non Rewarded Interstitial Banner
 3. Admob - Non Rewarded Interstitial Banner

4. Chartboost - Rewarded Video Ad and Non Rewarded Interstitial Banner
5. Facebook - Non Rewarded Interstitial Banner
6. Fyber - Rewarded Video Ad and Non Rewarded Interstitial Banner
7. Inmobi - Rewarded Video Ad and Non Rewarded Interstitial Banner
8. Supersonic - Rewarded Video Ad and Non Rewarded Interstitial Banner
9. MoPub - Rewarded Video Ad and Non Rewarded Interstitial Banner
10. TapJoy - Rewarded Video Ad and Rewarded Interstitial Banner
11. Unity - Rewarded Video Ad and Non Rewarded Video Ad
12. Vungle - Rewarded Video Ad

Notes

1. Android MinSDKVersion should be ≥ 14 .
