

AppLovin iOS Pokkt Mediation

Prerequisites

- Supports AppLovin version 3.2.2 and above.
- Please create account at www.applovin.com.
- There is no direct .ane file available in market so you will have to create your own .ane for this. We have created .ane for our testing purpose.
- Please read instructions at <https://www.applovin.com/index#iOSIntegration> to integrate your iOS application with AppLovin.
- Please read instructions at <https://www.applovin.com/index#iOSRewardedVids> to show rewarded video ads in your application.

Configuration in Application

- Add created .ane file in your air mobile project from project dependency.
- There is a file "AppLovinExtension_iOS.ane" inside POKKT SDK package. Please add this .ane also in project properties.

Code changes

- There is nothing to do in coding. Pokkt sdk ane file will be taking care of everything.
- Now the last part, please declare this class name in your POKKT dashboard.
