

Fyber iOS Pokkt Mediation

Prerequisites

- Supports Fyber version 8.2.0 and above.
- Please create account at <http://www.fyber.com/>
- There is no direct .ane file available in market so you will have to create your own .ane for this. We have created .ane for our testing purpose.
- Below link will help to understand how Fyber works: <http://developer.fyber.com/content/current/android/rewarded-video/>.
- Register your app here and do the required setting related to rewarded video.

Configuration in Application

- Add created .ane file in your air mobile project from project dependency.
- There is a file "FyberExtension_iOS.ane" inside POKKT SDK package. Please add this .ane in project properties.

Code changes

- There is nothing to do in coding. Pokkt sdk ane file will be taking care of everything.
- Now the last part, please declare this class name in your Pokkt account Dashboard.
- Notes: Fyber doesn't fire event for Video Displayed.
