

Getting Started with Pokkt SDK v6.1

1. Add "**PokktSDK.framework**" to your project.
2. Set **Application Id** and **Security Key** in Pokkt SDK. You can get it from Pokkt dashboard from your account. These are unique per app registered.

```
[PokktAds setPokktConfigWithAppId:(NSString*)appId  
securityKey:(NSString*)securityKey];
```

3. Set the following to enable or disable omission of Pokkt logs and other informatory messages. Make sure to set it to false before release.

```
[PokktDebugger setDebug:[YES/NO]];
```

4. Show **Video Ad** with one of the followings:

```
[PokktVideoAds showRewardedVideoAd:(NSString*) screenName  
viewController:(UIViewController *)viewController];  
[PokktVideoAds showNonRewardedVideoAd:(NSString*) screenName  
viewController:(UIViewController *)viewController];
```

5. Show **Interstitial Ad** with one of the followings:

```
[PokktInterstitial showRewardedInterstitial(NSString*) screenName  
viewController:(UIViewController *)viewController];  
[PokktInterstitial showNonRewardedInterstitial(NSString*) screenName  
viewController:(UIViewController *)viewController];
```

6. For **Banner Ad**

- Define a container (PokktBannerView) for banner something like following:

```
PokktBannerView *banner = [PokktBanner initWithBannerAdSize:CGSizeMake(0, 0,  
[UIScreen mainScreen].bounds.size.width, 50)];  
[self.view addSubview:banner];
```

- To load banner, use:

```
[PokktBanner loadBanner:banner withScreenName:screenTF.text  
rootViewController:self];
```

- Use the following to destroy banner:

```
[PokktBanner destroyBanner:<UIView>;
```

7. Implement **[PokktVideoAdsDelegate setPokktVideoAdsDelegate:]** to listen to video-ad related messages.
8. Implement **[PokktInterstitial setPokktInterstitialDelegate:]** to listen to interstitial-ad related messages.
9. Implement **[PokktBanner setPokktBannerDelegate:self]** to listen to banner-ad related messages.
10. We recommend caching of video-ads for better user experience, you can cache an ad using the followings:

```
[PokktVideoAds cacheRewardedVideoAd: (NSString*) screenName]  
[PokktVideoAds cacheNonRewardedVideoAd: (NSString*) screenName];
```

Check [POKKT_SDK_Integration_Guide\(_v6.1_Native_iOS\)](#) for detailed information.
