

Fyber iOS Pokkt Mediation

Prerequisites

- Supports Fyber version 8.2.0 and above.
 - Please create account at <http://www.fyber.com/>
 - Below link will help to understand how Fyber works: <http://developer.fyber.com/content/current/android/rewarded-video/>.
 - Register your app here and do the required setting related to rewarded video.
-

Configuration in Application

- Add downloaded Fyber fat file (.a) in your project folder.
- Downloaded Pokkt SDK package will have one folder "Mediation". Copy libFyberExtension.a file and keep it in your project folder.

Example: You need to add all these details in "**Additional mtouch arguments**". These option you can get it from project->options->iOS Build->"Additional mtouch arguments". So add "libFyberExtension.a", required framework for Fyber and Fyber.framework under Additional mtouch arguments like below:

```
-gcc_flags "-F${ProjectDir} -framework AdSupport -framework CoreGraphics -L${ProjectDir} -lFyberExtension -lFyberSDK-8.1.1 -force_load ${ProjectDir}/libFyberExtension.a -force_load ${ProjectDir}/libFyberSDK-8.1.1.a"
```

Code changes

- There is nothing to do in coding. Pokkt sdk will be taking care of everything.
- Now the last part, please declare this class name in your Pokkt account.
- Notes: Fyber doesn't fire event for Video Displayed.
