

Supersonic iOS Pokkt Mediation

Prerequisites

- Supports Supersonic version 6.3.8 and above.
- Please create account at <https://www.supersonicads.com/>
- Please download the Supersonic iOS framework from this link: <http://developers.supersonic.com/ios/ios-sdk/>.
- Register your App here and add the placement for rewarded video accordingly and do the setting as per given in doc.

Configuration in Application

- Add downloaded Supersonic framework in your project folder.
- Downloaded Pokkt SDK package will have one folder "Mediation". Copy libSupersonicExtension.a file from this folder and keep it in your project folder.

Example: You need to add all these details in "**Additional mtouch arguments**". These option you can get it from project->options->iOS Build->"Additional mtouch arguments". So add "libSupersonicExtension.a", required framework for Supersonic and Supersonic.framework under Additional mtouch arguments like below:

```
-gcc_flags "-F${ProjectDir} -framework Supersonic -framework AdSupport -framework CoreMedia -L${ProjectDir} -lSupersonicExtension -force_load ${ProjectDir}/libSupersonicExtension.a"
```

Code changes

- There is nothing to do in coding. Pokkt sdk will be taking care of everything.
- Now the last part, please declare this class in your Pokkt account
- Notes: Supersonic doesn't fire event for Video Displayed.
