

# Civility, safety & interaction online

In an effort to promote safer, healthier, and more respectful online interactions among all people since 2016, Microsoft has been surveying teens and adults around the world about the state of digital civility. This latest survey marks the fifth straight year of that research, where we again asked respondents about their exposure to 21 different online risks across four categories: behavioral, sexual, reputation, and personal/intrusive. In total, over 16,000 respondents in 32 geographies participated, evenly divided between adults and teens. The research was completed in April and May 2020. Read on for a summary of the latest results, some of which may surprise you.

## Digital Civility improved by 3 points in 2020 to 67

## Online civility rated less negatively in 2020

## Social media companies expected to make biggest contribution to improving online civility in the 2020s

## Risks that spread hate and division continued to grow

## One in four said civility online was better during Covid-19

## Nearly 4 in 10 involved in a bullying incident

## "Bullying" inside the workplace
