

$$\tan(90^\circ - \theta) = \cot(\theta)$$

$$\cos(90^\circ - \theta) = \sin \theta$$

$$\tan(90^\circ + \theta) = \frac{-y}{x} \quad (x)$$

$$= -\frac{y}{x} = -\cot \theta$$

$$\sin(180^\circ - \theta) = +\sin \theta$$
