

① Write a program for the restaurant billing system using switch case. use the following conditions.

Ask the users to enter if he wanted

Burger - B

Pizza - P

Sandwich - S

After entering the option print its price. Then ask for money

he have with him. compare the

money and price of product and

print if he can buy that product

or not.

② Write a program for Apple store.
Take the input from the buyer,
the model he wanted to purchase.
and print their specifications based
on the model.

Ex: If he entered '7'

processor - A10Fusion
Ram - 2GB
Battery - 1960mAh

③ Write a program to take input
the gear numbers which he is
driving the car and print the
speed according to the gear.

Ex: For '1' - 20kmph

∴ For 'R' reverse '4' - 60kmph

gear you don't '5' - 100kmph
need to print
the speed.

④ Write a c program for taking input of subject for a subjects. Then ask for marks he get in that subject and print his grade.

Expected output :

user should enter subject first and then ~~marks~~ ~~to~~ ~~get~~ print the full form of subject and then ask for the marks to the user.
