

Business plan

We are helping Grade 3 students with their maths. Sometimes students experience difficulty in Maths at Craigslea. So we made an app to help them improve in maths and become more engaged in this subject so they are not bored.

There will be a log-on screen so only Year 3 students at Craigslea State School can use this Maths app.

The features on the home screen include 3 main buttons: Messaging, where students can chat to each other; Maths Games, where skills are practiced in games; and Activities, where students can practice times tables.

So Craigslea students will have a fun and easy time doing maths. It also gets other students involved with maths test knowing that they will have an easier time.

We are selling our app to year 3s at craigslea students and we hope at least half of the students will use the app.

The app will have a yearly subscription of \$2.00 dollars a year the cost will be free to get the app. Each year the logins will be change

The app will be a yearly subscription for \$2.00 dollars and we would have up to year 5 and year 6s will be helping the year 3s.

We would go to the grade 3's and their teachers and explain to them the app and how they can get it.

More information on some of the games and activities. What grade 6s are going to help with the app.
